

Dr. **Mohsen Sheikholeslami** works at the Babol Noshirvani University of Technology's Department of Mechanical Engineering in Iran. He is head of *Renewable energy systems and nanofluid applications in heat transfer* Laboratory at Babol Noshirvani University of Technology. His research interests are Renewable energy, Solar collector, Nanofluid, Computaitona fluid dynamic, Numerical simulation, Phase chnage material. His efforts would focus on the area of renewable energy and environmental sustainability. The main topics include the methods for improving the functionality of solar thermal systems, proposing innovative factors for enhancing the thermal and electrical efficiency of PVT systems, reducing the temperature of PV cells, utilizing concentrating systems such as LFR and Parabolic reflectors integrated with PV systems, employment of PCMs within thermosyphon evacuated tube collectors as the novel method for the system development, and inside the PVT systems for cooling purposes. Ultimately, future research can also be fixated on the utilization of concentrated heat by LFR and parabolic reflectors for the intensification of PCMs melting rate. According to scopus, he published 450 ISI journal papers, Citation:36998, H-index:121. Besides, various Books have been published in reputable publisher such as ELSEVIER, SPRINGER. More than 100 of them are highly cited papers. According to the reports of Clarivate Analytics, he has been selected as a Web of Science **Highly Cited Researcher** (Top 0.01%) in 2016, 2017, 2018 (<https://clarivate.com/hcr>). Moreover, he is **First** rank of the world in field of Mechanical Engineering & Transports based on Stanford University ranking in 2021, 2022 (<https://elsevier.digitalcommonsdata.com/datasets/btchxktzyw/3>).
